Dear Members of VILNIUS TECH Students' Representation,

I am Goda Šarauskaitė, a Financial Engineering student at VILNIUS TECH and an active member of the Students' Representation. Currently, I serve as the administrator of VILNIUS TECH SR central office, and previously I was chairperson of the Faculty of Business Management Students' Representation. These experiences within the organization encouraged me to run for the position of VILNIUS TECH SR Control Commission member.

While working in the Students' Representation, I had the opportunity to closely familiarize myself with the organization's activities, decision-making processes, and internal procedures. By administering the central office documentation, working with contracts, authorizations, and other organizational documents, I realized how important clear rules, transparency, and accountability are for the functioning of the organization. This experience allowed me to see the Representation from within and better understand the importance of ensuring that decisions and processes are implemented consistently and in accordance with established principles.

However, my experience in the Students' Representation is not limited to document administration. While serving as the chairperson of the faculty, I was elected Chairperson of the year, which reflects my strong communication, team-building, and representation skills. This experience taught me how to communicate constructively with different parts of the organization, resolve complex situations, and search for solutions that help ensure the smooth functioning of the organization.

By running for the position of Control Commission member, I aim to contribute not only to the supervision of the Representation's activities but also to the development of a more open and trust-based culture of oversight. It is important to me that the Control Commission is accessible and approachable to all members of the organization, so that anyone can reach out without fear or the assumption that its function is only to evaluate or punish.

In my view, Control Commission within the organization can also be a real form of support in various everyday situations – from issues related to minutes and procedures to challenges involving human resources, teamwork, or event organization. I believe that the Control Commission can act as an institution that helps find solutions, ensures clarity, and contributes to the smoother functioning of the organization.

Sincerely,
